

IN THE CLAIMS:

Please amend the claims as follows:

--4. (Amended) A method for changing over to a different frequency in accordance with claim 1, wherein:

    said first base station transmits a first broadcast channel and said second base station transmits a second broadcast channel, and

    said first reception quality is reception quality in said first broadcast channel and said second reception quality is reception quality in said second broadcast channel.

5. (Amended) A method for changing over to a different frequency in accordance with claim 1, further comprising the steps of:

    making a data vacant time in which data are not transmitted by compressing transmitting data in the time by said first base station; and

    measuring said second reception quality in said data vacant time by said mobile communication terminal.

11. (Amended) A cellular phone system in accordance with claim 8, wherein:

    said first base station transmits a first broadcast channel and said second base station transmits a second broadcast channel, and

said first reception quality is reception quality in  
    said first broadcast channel and said second reception quality  
    is reception quality in said second broadcast channel.

12. (Amended) A cellular phone system in accordance  
with claim 8, wherein:

    said first base station, comprising:  
        a data vacant time making means for making a data  
        vacant time in which data are not transmitted by compressing  
        transmitting data in the time, and

    said mobile communication terminal, comprising:  
        a measuring means for measuring said second reception  
        quality in said data vacant time.--
